A Sr. web app developer with experience in team and project management. I am looking for a position to utilize my knowledge and skills to help a company complete and surpass their goals. I thrive off of new challenges and problem-solving, and love to learn and teach in the process.

WORK EXPERIENCE

Senior Systems Engineer Sealed Air Corp Mar 2019 - Nov 2024

- Lead in-house & external developers on various applications in the Outsystems Platform
- Oversee development of MES execution system, supporting applications, & mobile apps
- Manage and execute DevOps procedures, while maintaining auditing standards
- Manage workload and learning progression of development team
- Work on-site with new application users & provide support during app go-live training
- Create, implement, and manage new critical system features for MES application
- Create & implement event based data refresh using node.js, express, & socket.io
- Investigate and execute changes to architecture to improve application organization
- Monitor and improve on application and system performance
- Manage and resolve customer/user support tickets
- Support internal chemical and formulation management application Fusion (.NET)
- Support in SQL development and optimizations
- Support in managing internal and external development team
- Implement code reviews and developer sprint retroactive sessions
- Improve on development procedures to ensure proper internal standards
- Manage and resolve customer/user support tickets
- Support in creating technical documentation and knowledge transfer documentation

Senior Programmer Help Worldwide Inc Mar 2015 - Dec 2019

- Web development utilizing Classic ASP, PHP, Javascript, & OutSystems platform
- API Integrations (REST & SOAP)
- Converting mock-up designs into web pages
- Provided leadership and mentoring to junior developer
- Tuned environment to ensure the high level of customer experience. Added indexes and optimized SQL queries
- Designed and implemented complex work flows and database relationships to display featured deals based on product categories, user location, and agency
- Implemented a registration system that included email validation using one time hash tokens
- Created and modified existing data model to support new features and functionality
- Created and implemented a PCI compliant payment system utilizing fort knox level encryption and token based acceptance for payments and storing customer information
- Designed and built a mobile app prototype that allowed video streaming, points rewards, product purchases, P2P transfer (money & points), Chat room & messaging system, and more. App also capable of allowing white labeled functionality for re-branding.
